Serious about power? We are!

Dyno Testing

We have a purpose built test cell facility complete with a new state-of-the-art 4 wheel drive rolling road dynamometer. High power airflow and extraction systems to control the test environment, 12 channel high speed data logging to measure; power output, engine torque, boost pressure, temperatures and air / fuel ratio.

We can handle 2 & 4 wheel drive vehicles as well as motorcycles via a specially designed adaptor.

Engine Mapping

We use three different approaches for mapping an engine:

Chiping (Flashing), some times called flashing, this is where we reprogramme the manufactures engine management system

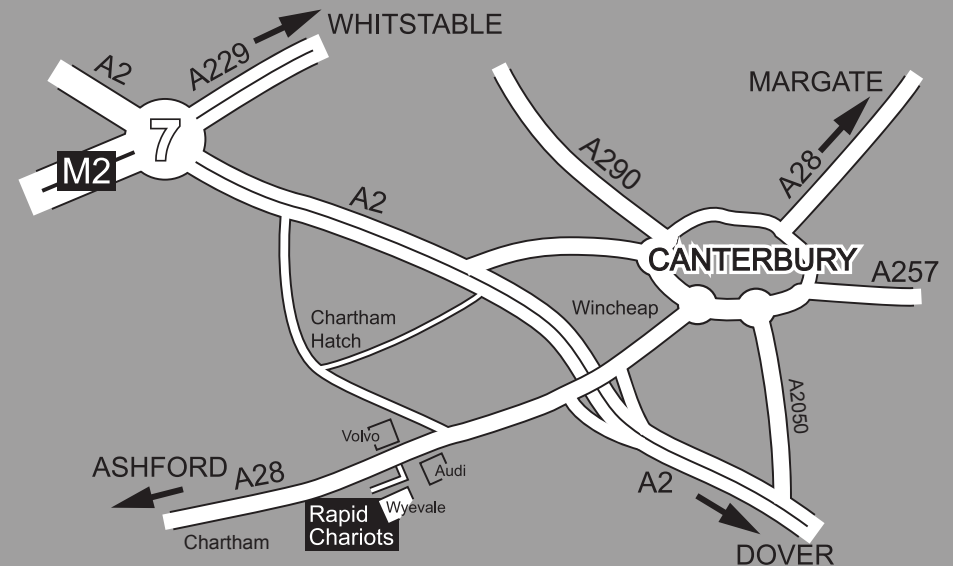

Piggy-back, We use the Dastek Unichip Q which plugs into the back of the manufactures engine management system

Programmable EMS (Engine Management System), total control over the engine tuning parameters

How to find us

Located on the A28, 2 miles from Canterbury near Chartham opposite Lipscomb Volvo behind the Wyevale garden centre.
Unit 6, Stour Valley Business Park,
Ashford Road
Canterbury, Kent, CT4 7HF
